Fees Subtotal: \$25.00

Tax: \$45.07

Job Subtotal: \$946.52

### Resolution:

Change engine oil and filter  
Check all switches work & cables lubricated.  
4x4 switch wasn't working, removed rear fenders and fuel tank to diagnose. Checked switch and actuator both tested good. Reset belt switch and 4x4 is working good now. Quad would start then run intermittently. Found a connection in the wiring that someone had added a linkage wire between 2 grounds. Making intermittent connection. Removed connection and hooked grounds to proper placement.  
Clean air box and filter  
Change spark plug  
Check Valve Cover Gasket  
Check battery charge  
Check drive belt. Good  
Clean clutch, check over internal components  
Check CVT Boots  
Grease all areas  
Check brake lines, calipers, fluid, pads.  
Changed fluid in front brakes  
Check over cooling system (coolant). Air cooled  
Check exhaust
